

AI-Stack GPU Resource and AI Infrastructure Management Platform

INFINITIX' s AI-Stack offers comprehensive AI infrastructure management solutions, integrating GPU partitioning(NVIDIA/AMD), GPU aggregation, cross-node computing, intuitive user interface, multi-cloud management, open-source deep learning tools, and environment deployment features. It is an essential key tool for enterprises when adopting AI services.

The Three Core Technologies of AI-Stack for GPU Computing Resource Management

GPU Partitioning

Divides a single GPU into multiple independent units, accommodating training needs at various scales. This boosts the utilization rate of GPU to over 90%, significantly reducing the waste of computational resources.

GPU Aggregation

Aggregates the computing power of multiple GPUs to fulfill the training requirements of large AI/ML models. This greatly accelerates the training speed and enhances development efficiency.

Cross-Node Computing

Distributes training tasks across multiple nodes using distributed parallel processing techniques, enabling parallel processing of massive datasets and effectively reducing model training time.

GPU Resource Management + MLOps

- More precise and effective management of GPU resources.
- Resource isolation, permission management, and quota limitations.
- Comprehensive dashboard for real-time monitoring of GPU computing resources.
- Environment deployment features and MLOps management tools.
- Seamless connection with commonly used AI development tools.
- Automated execution with options for single or batch tasks.
- Model inference deployment services.

Fulfilling all MLOps Requirements from Development to Operations Management

AI-Stack is built for enterprises, providing comprehensive AI infrastructure solutions, covering everything from hardware management to model deployment. It maximizes GPU utilization, simplifies the AI development process, lowers the barriers to AI adoption, and accelerates digital transformation.

AI-Stack Application Industries

Administrators|IT Manager

- Enterprise-grade security protection and efficient resource utilization.
- Project permission management and quota limitations.
- Professional dashboard features for real-time monitoring of GPU resource usage.

Users|Data Scientist and AI Resercher

- Start AI container deployment in just 1 minute.
- Focus on research, model development, and training.
- Automate scheduled training tasks.
- Quickly deploy inference models.
