

NVIDIA – Empowering AI Ecosystems

Dr. Deb Goswami (Head of Developer Ecosystems, ASEAN + ANZ)

NVIDIA - Our Body of Work

NVIDIA pioneered accelerated computing to tackle challenges no one else can solve.
Our work in AI and digital twins is transforming the world's largest industries and profoundly impacting society.

Transforming Industries

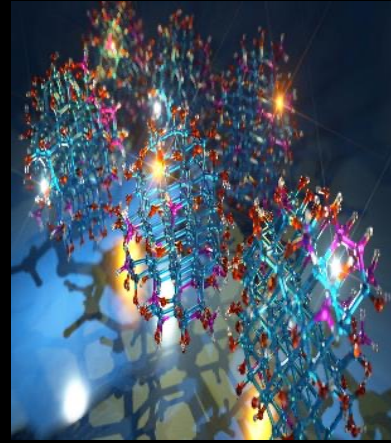

INNOVATION

Unleashes innovation across industries, start-ups, academia and Ministries

PRODUCTIVITY

Helps reinvent work, create new jobs, bring a new competitive advantage

SCIENCE

Transforms scientific research, drug discovery, genomics, and clinician productivity

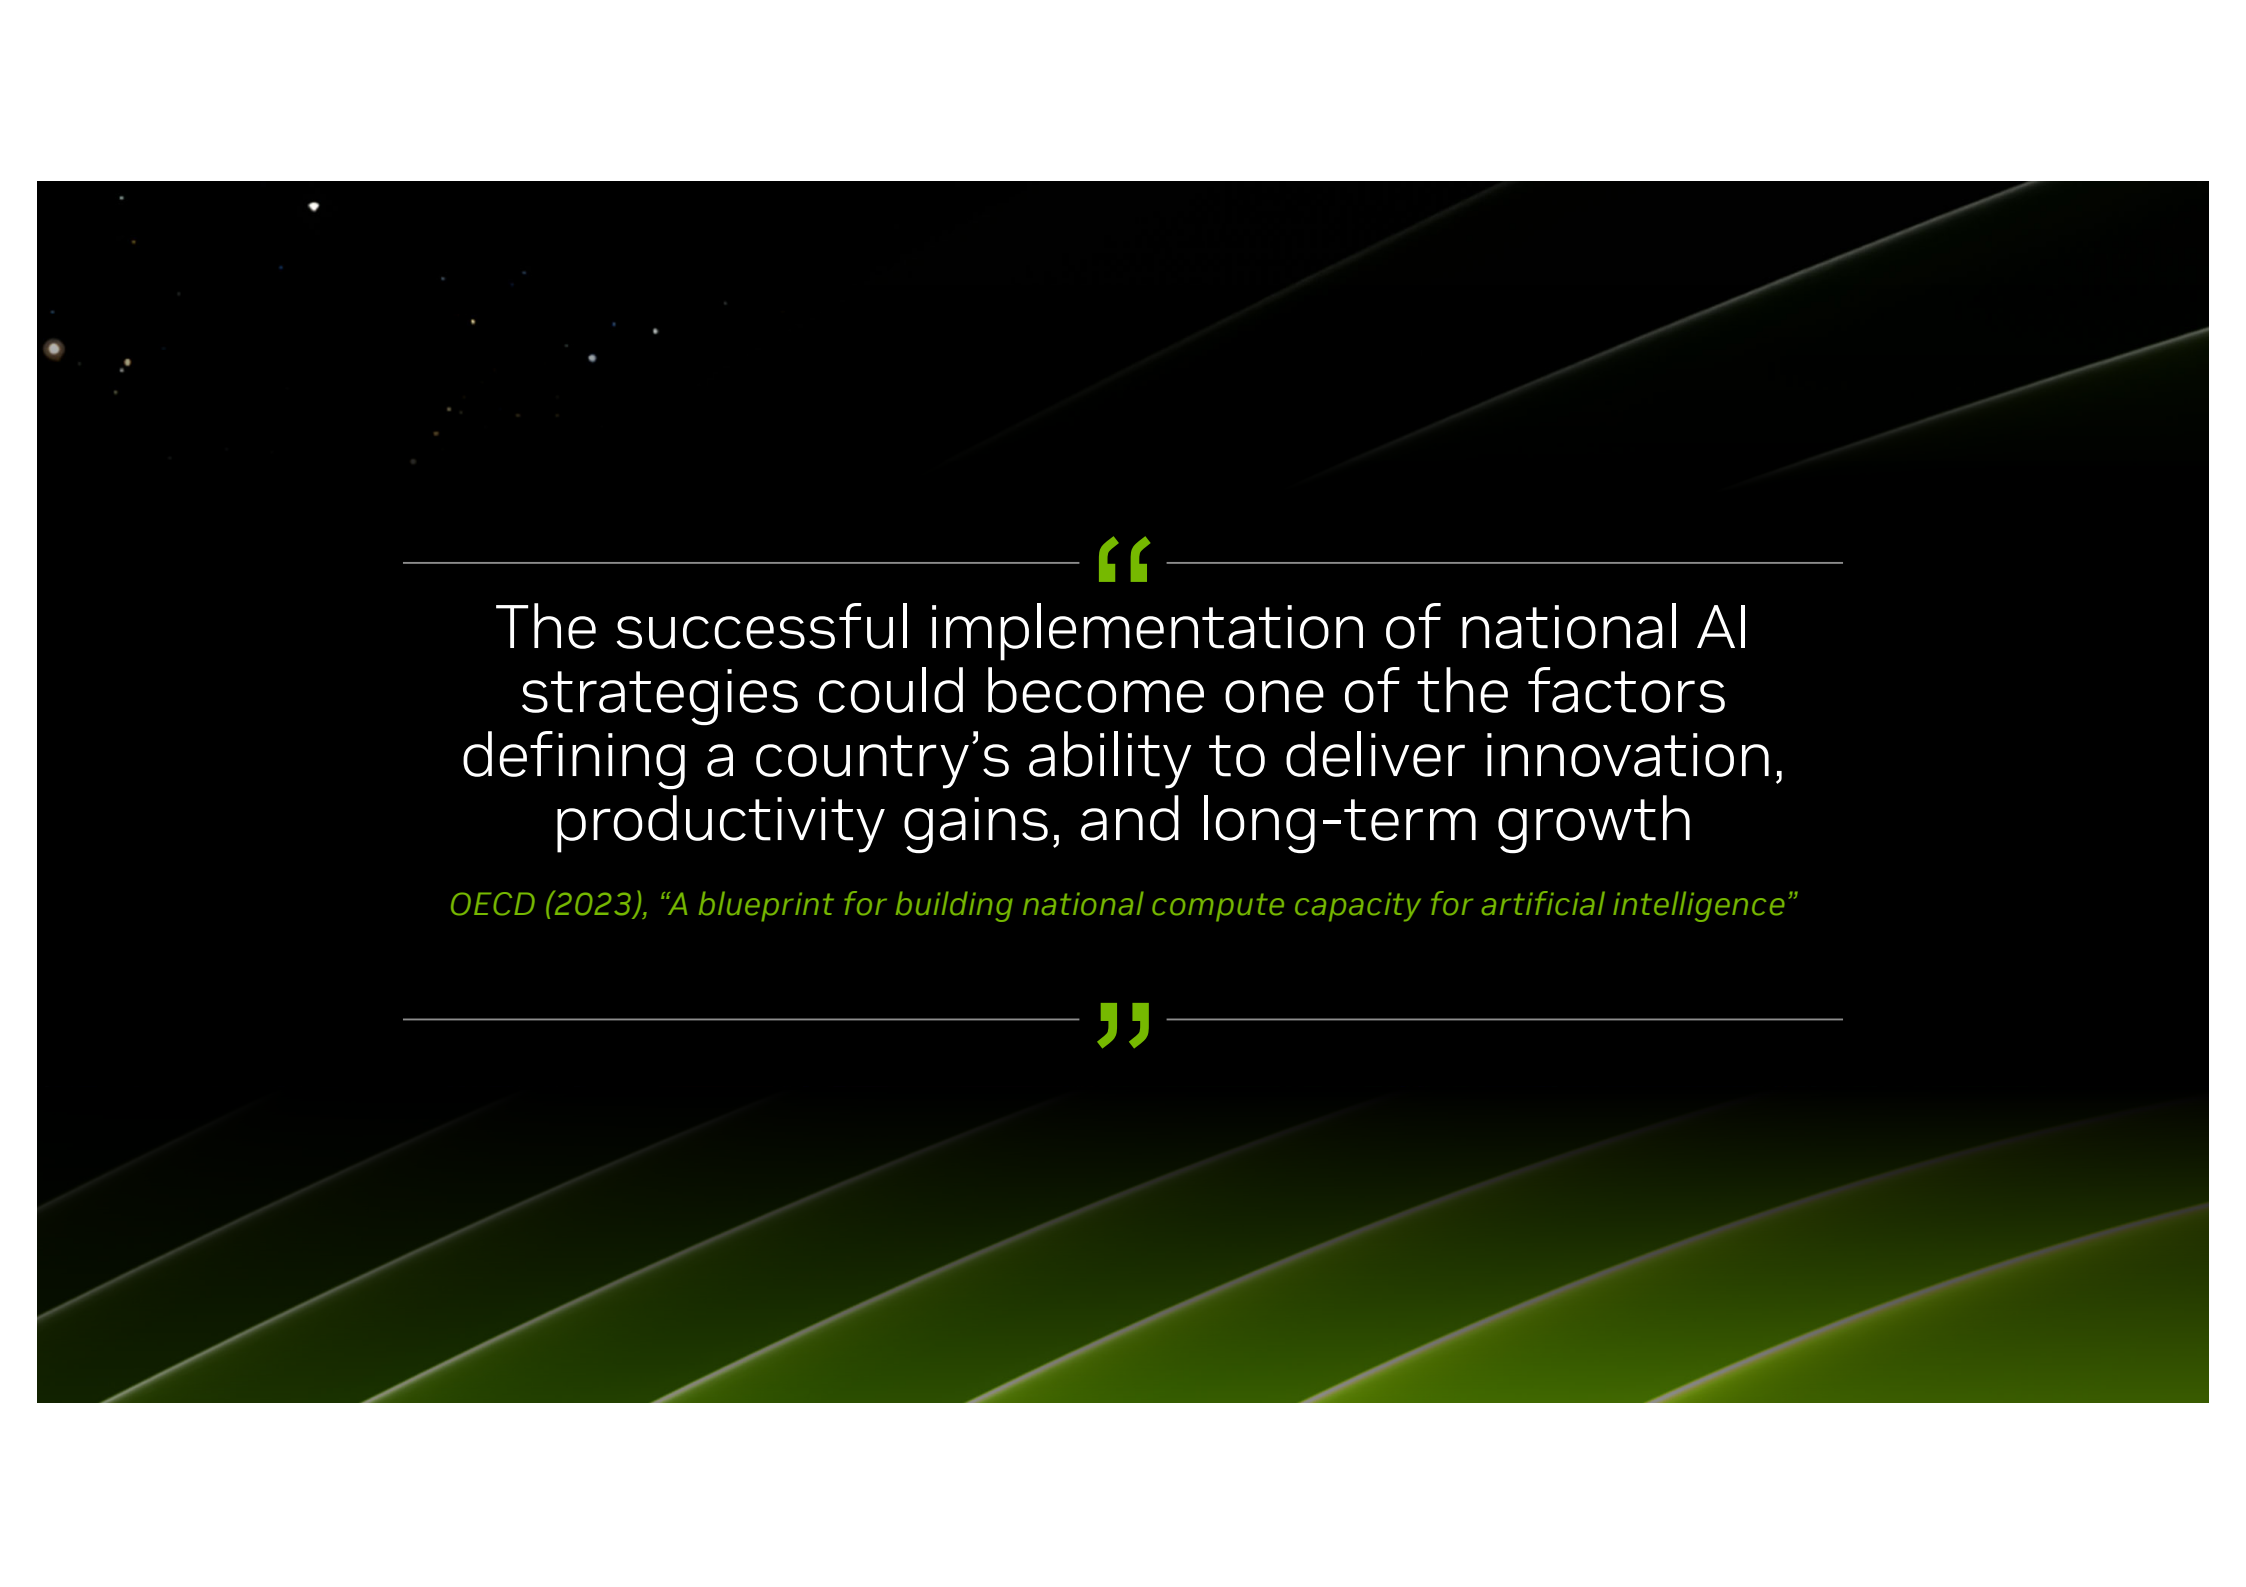

CULTURE

Ensures that local language, culture, history and values are protected and represented

Generative AI is Unleashing Innovation across Economies

For many nations, developing sovereign foundation models is a new priority AI initiative

“

The successful implementation of national AI strategies could become one of the factors defining a country's ability to deliver innovation, productivity gains, and long-term growth

OECD (2023), “A blueprint for building national compute capacity for artificial intelligence”

”

Sovereign AI Helps to Localize Generative AI Adoption

Helps many nations to localize the solution meeting local law and needs

Protect National Security

Personalized Citizen Services

Regulatory Compliance and Enforcement

Education and Skills Development

Adaptive personalized learning materials | Student Analytics
Virtual Teaching Assistants | Education Policy Analysis

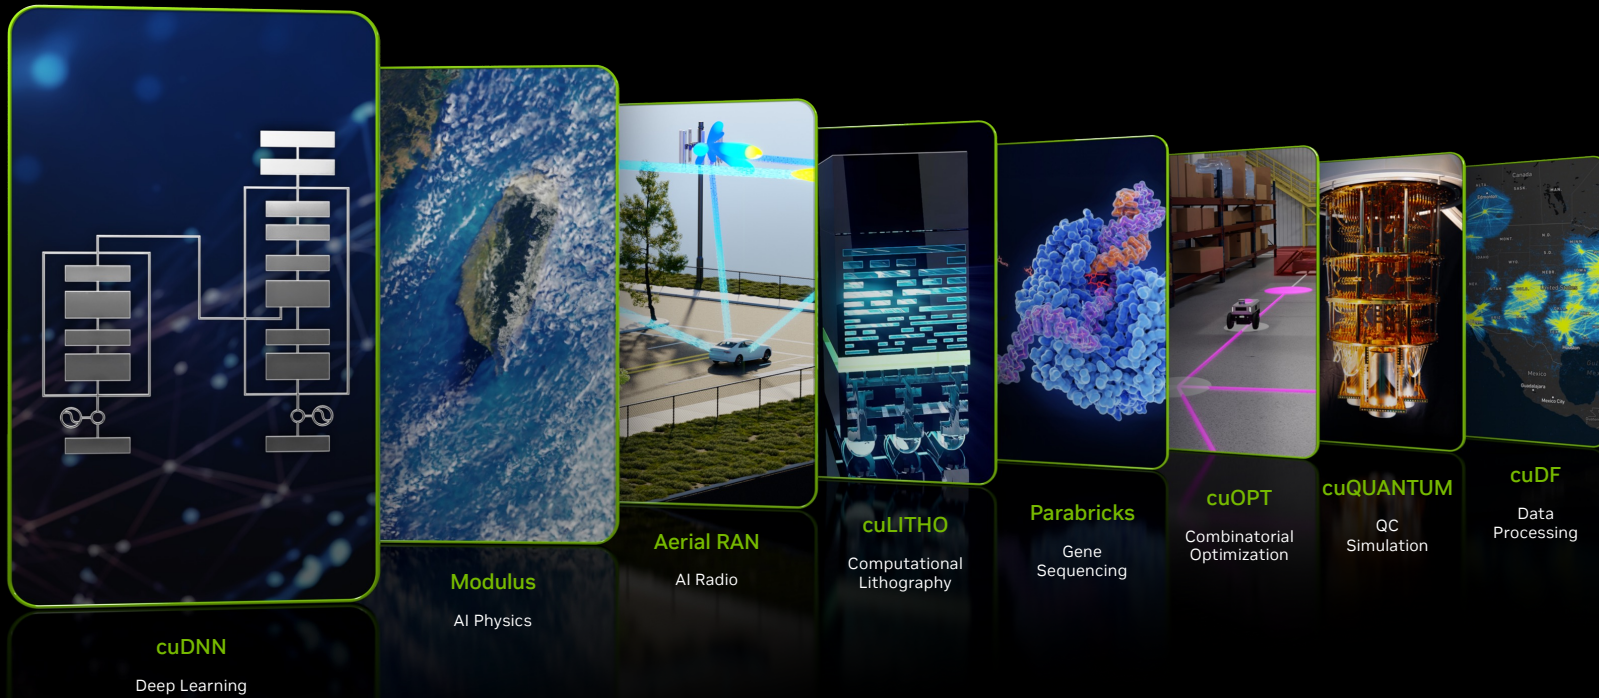

Urban Planning and Smart Cities

Urban Design and Simulation | Public Space Optimization

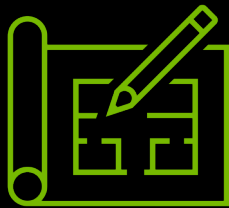

Environment GPT - Scenario Generation |
Climate Policy Assessment and Adaptation Planning

NVIDIA Cuda LIBRARIES Open New Markets

Empowering Sovereign and Enterprise AI

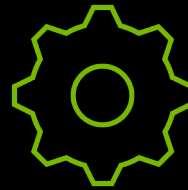

Compute

End to end - compute,
networking and software
Optimized for AI workloads
Performance at scale

Key Updates from GTC '25 – Agentic AI

What is Agentic AI?

Predictive AI

Enables systems to observe and understand their surroundings but does not create or decide independently

Ex: Computer Vision such as facial recognition, object detection.

Generative AI

Produces novel outputs that are coherent and contextually relevant, often augmenting or assisting human creativity

Ex: ChatGPT, customer service chatbots

Agentic AI

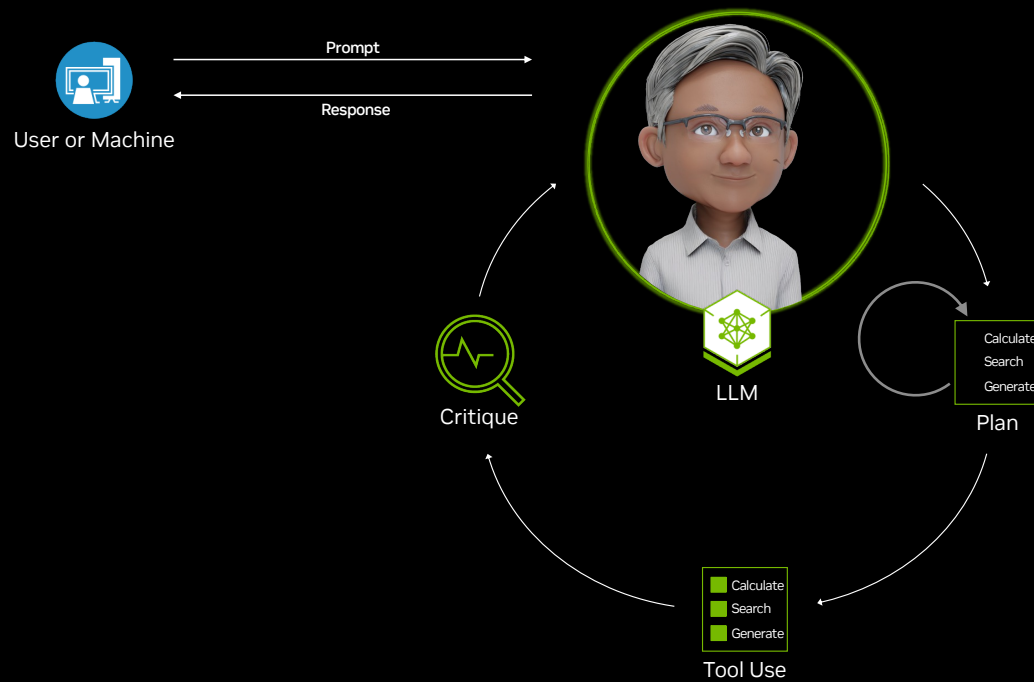

Acts independently to achieve specified objectives, often adapting to new information dynamically.

Memory, Reasoning, Connects to agents or tools to accomplish objectives

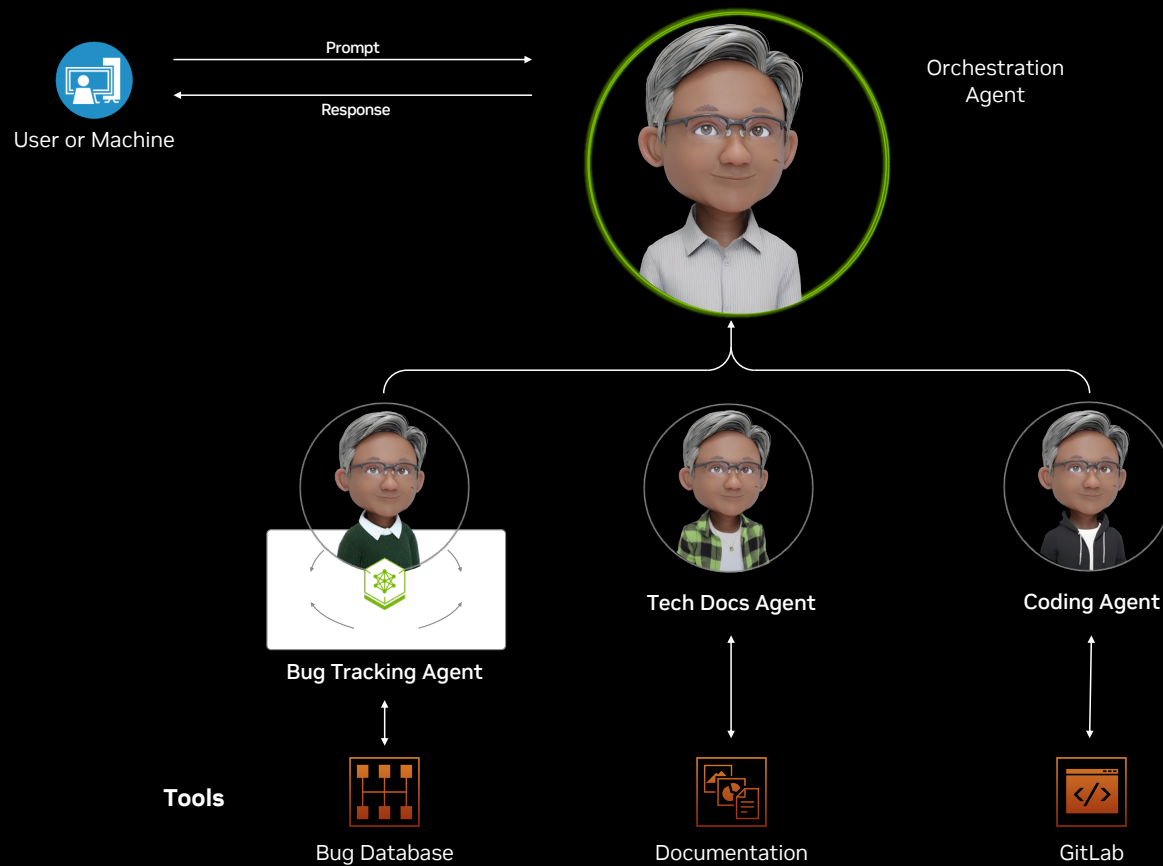

Ex: Virtual Agents capable of managing schedules, making purchases, or solving problems

How AI Agents Work

AI Agents solve problems and use tools to complete work

Specialized Agents Form Teams to Automate Work
